

# CONVEYING & AUTOMATION

## 12 Hydraulic lifting table

Hydraulic lifting tables are hydraulically driven devices equipped with roll conveyors of different types for the transportation of wood board packets. Integrated hydraulic lifting tables enable the levelling of planes in both mechanical production and manual operation. They are used in co-operation with storing and sorting devices. They may work independently as independent machines or can be furnished in transporting systems.

### Advantages of hydraulic lifting table:

- it is possible to build roller, chain or belt conveyors,
- works with devices to storage and sorting,
- it has a drive based on hydraulics which allows the transport of heavy loads,
- it has a smooth height adjustment,
- it can work as a stand alone device or in transport systems.

### SPECIFICATION:

\* The values refer to standard devices.

We carry out projects according to specific customer requirements.

Load per device	Q	up to 6 t
Working height		up to 1100 mm
Minimal height		230 mm
Table dimensions		as required
